Rebirth in the Life and Works of Beatrix Potter Richard Tuerk 2020-02-28 This work traces the concepts of initiation and rebirth through Beatrix Potter's personal writing and her children's fiction. Drawing from Potter's letters and journals, it analyses her attempts to escape from what she called her "unloved birthplace" and her overbearing parents to find a happy mature life. Potter felt that her life culminated in her forties, when she was, in effect, reborn through marriage as Mrs. William Heelis, a farmer raising Herdwick sheep and buying land for the National Trust. The language of transformation and rebirth used throughout her personal writing is echoed in Potter's fiction. From her first book, *The Tale of Peter Rabbit*, through some of the last, such as *The Fairy Caravan* and *The Tale of Little Pig Robinson*, central characters undergo processes of initiation during which they mature toward adulthood. The most successful ones move from being helpless children to being more mature creatures on their way to independence, while others experience no change or even a regressive change.

Condemned Graham Seal 2021-05-18 A powerful account of how coerced migration built the British Empire In the early seventeenth century, Britain took ruthless steps to deal with its unwanted citizens, forcibly removing men, women, and children from their homelands and sending them to far-flung corners of the empire to be sold off to colonial masters. This oppressive regime grew into a brutal system of human bondage which would continue into the twentieth century. Drawing on firsthand accounts, letters, and official documents, Graham Seal uncovers the traumatic struggles of those shipped around the empire. He shows how the earliest large-scale kidnapping and transportation of children to the American colonies were quickly bolstered with shipments of the poor, criminal, and rebellious to different continents, including Australia. From Asia to Africa, this global trade in forced labor allowed Britain to build its colonies while turning a considerable profit. Incisive and moving, this account brings to light the true extent of a cruel strand in the history of the British Empire.

More Philip Coggan 2020-02-13 There are 17 ingredients in a typical tube of toothpaste, from titanium dioxide to xanthum gum, and that's not counting the tube. Everything had to come from somewhere and someone had to bring it all together. The humblest household product reveals a web of enterprise that stretches around the globe. More is the story of how we spun that web. It begins with the earliest glimmerings of long-distance trade - obsidian blades that made their way from what is now Turkey to the Iran-Iraq border 7,000 years before Christ - and ends with the consequences of the Covid-19 pandemic. On such a grand scale, quirks of historical perspective leap out: futures contracts and commercial branding are among the many seemingly modern components of the global economy have existed since ancient times. Yet it was only in the 18th century that a cascade of innovations began to drive up prosperity in a lasting way around the world. To piece this fascinating saga together, Philip Coggan takes the reader inside medieval cottages and hi-tech hydroponic farms, prehistoric Chinese burial mounds and modern central banks. At every step of our journey, he finds that it was connections between people that created our wealth. Will the same openness continue to serve us in the 21st century?

The Botany of Desire Michael Pollan 2002-05-28 The book that helped make Michael Pollan, the New York Times bestselling author of *How to Change Your Mind*, *Cooked* and *The Omnivore's Dilemma*, one of the most trusted food experts in America Every schoolchild learns about the mutually beneficial dance of honeybees and flowers: The bee collects nectar and pollen to make honey and, in the process, spreads the flowers' genes far and wide. In *The Botany of Desire*, Michael Pollan ingeniously demonstrates how people and domesticated plants have formed a similarly reciprocal relationship. He masterfully links four fundamental human desires—sweetness, beauty, intoxication, and control—with the plants that satisfy them: the apple, the tulip, marijuana, and the potato. In telling the stories of four familiar species, Pollan illustrates how the plants have evolved to satisfy humankind's most basic yearnings. And just as we've benefited from these plants, we have also done well by them. So who is really domesticating whom?

Stoffwechselphysiologie der Pflanzen Gerhard Richter 1998 Standardlehrbuch eines wichtigen Prüfungsfaches. Setzt erhebliche chemische Kenntnisse voraus, deshalb vor allem für Hauptfach-Biologen. Für diese aber notwendig. Auflage gegenüber der 5. (ID 48/88) erheblich verändert, so wurde auf eine allzu detaillierte Beschreibung mancher komplexer Sachverhalte und spezieller Biosynthesen verzichtet, die der Autor in seiner vor kurzem erschienen "Biochemie der Pflanzen" (ID 16/97) behandelt hat. Positiv hervorzuheben - und allgemein für Hochschullehrbücher längst überfällig - ist die unter didaktischen

Gesichtspunkten veränderte Gestaltung: Einführung von Merksätzen und Boxen mit ergänzenden Informationen zum Basistext und zweifarbig ausgeführte Abbildungen und Schemata. Voraufgaben löschen. (3) (LK/SH: Enderle).

Plant Systematics Michael G. Simpson 2006 *Plant Systematics* contains the essential paradigms, concepts, and terms required for a basic understanding of plant systematics at the graduate or undergraduate level. Plant systematics is an area central to numerous other biological disciplines, and a large subset of plant scientists are required to take a course in plant systematics. Almost all ecologists, horticulturalists, plant developmental biologists, and plant pathologists are interested in plant systematics because it is central to their studies of the plants that form such a large part of every ecosystem and experimental system.

Basic Mathematics for College Students with Early Integers Alan S. Tussy 2014-01-01 Offering a uniquely modern, balanced approach, Tussy/Gustafson/Koenig's BASIC COLLEGE MATHEMATICS WITH EARLY INTEGERS, Fifth Edition, integrates the best of traditional drill and practice with the best elements of the reform movement. To many developmental math students, mathematics is like a foreign language. They have difficulty translating the words, their meanings, and how they apply to problem solving. Emphasizing the "language of mathematics," the text's fully integrated learning process is designed to expand students' reasoning abilities and teach them how to read, write, and think mathematically. It blends instructional approaches that include vocabulary, practice, and well-defined pedagogy with an emphasis on reasoning, modeling, communication, and technology skills. Sustainable Winter Fodder Imran ul Haq 2021-10-01 Forage crops are an essential component of livestock's diet. Production and availability of sufficiently good quality forage under diverse ecological dynamics are fundamental to develop an efficient and productive livestock industry. Growers worldwide, especially in developing and underdeveloped countries, face significant challenges in producing sufficient winter fodder. The livestock population is increasing at high rates, and its feed requirement is increasing accordingly. Fodder crops are the leading and cheapest source of feed for livestock; however, the shortage of fodder production is the primary limiting factor for livestock production. This book features an extensive overview of literature providing information on winter fodders used in livestock management. Key features Discusses breeding strategies of winter fodders through conventional approaches and biotechnology. Highlights production, agronomy, and bioecology of winter fodder crops. Provides comprehensive information on the ecological dynamics of winter fodders. Describes the use of precision agriculture for mitigating the effect of climate change on winter fodders. Relays challenges of winter fodder crops on account of microbes, toxins, pests, and diseases. This book is written for researchers and practitioners in agronomy, biotechnology, bioecology and is a comprehensive guide for improving winter fodder production.

Biology Eldra Solomon 2014-01-01 Solomon/Martin/Martin/Berg, BIOLOGY is often described as the best majors text for LEARNING biology. Working like a built-in study guide, the superbly integrated, inquiry-based learning system guides you through every chapter. Key concepts appear clearly at the beginning of each chapter and learning objectives start each section. You can quickly check the key points at the end of each section before moving on to the next one. At the end of the chapter a specially focused summary provides further reinforcement of the learning objectives and you are given the opportunity to test your understanding of the material. The tenth edition offers expanded integration of the text's five guiding themes of biology (the evolution of life, the transmission of biological information, the flow of energy through living systems, interactions among biological systems, and the inter-relationship of structure and function). Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Darwin and Modern Science A. C. Seward 2016-02-22 PREFACE At the suggestion of the Cambridge Philosophical Society, the Syndics of the University Press decided in March, 1908, to arrange for the publication of a series of Essays in commemoration of the Centenary of the birth of Charles Darwin and of the Fiftieth anniversary of the publication of "The Origin of Species". The preliminary arrangements were made by a committee consisting of the following representatives of the Council of the Philosophical Society and of the Press Syndicate: Dr H.K. Anderson, Prof. Bateson, Mr Francis Darwin, Dr Hobson, Dr Marr, Prof. Sedgwick, Mr David Sharp, Mr Shipley, Prof. Sorley, Prof. Seward. In the course of the preparation of the volume, the original scheme and list of authors have been modified: a few of those invited to contribute essays were, for various reasons, unable to do so, and some alterations have been made in the titles of articles. For the selection of authors and for the choice of subjects, the committee are mainly responsible, but for such share of the work in the preparation of the volume as usually falls to the lot of an editor I accept full responsibility. Authors were asked to address themselves primarily to the educated layman rather than to the expert. It was hoped that the publication of the essays would serve the double purpose of illustrating the far-reaching influence of Darwin's work on the progress of knowledge and the present attitude of original investigators and thinkers towards the views embodied in Darwin's works.

Ladies in the Laboratory III Mary R. S. Creese 2010-02-08 Published in 1998, Ladies in the Laboratory provided a systematic survey and comparison of the work of 19th-century American and British women in scientific research. A companion volume, published in 2004, focused on women scientists from Western Europe. In this third volume, author Mary R.S. Creese expands her scope to include the contributions of 19th- and early 20th-century women of South Africa, Australia, New Zealand, and Canada. The women whose lives and work are discussed here range from natural history collectors and scientific illustrators of the early and mid years of the 19th century to the first generation of graduates of the new colonial colleges and universities. Rarely acknowledged in publications of the British and European specialists, the contributions of these women nonetheless formed a significant part of the natural history information about extensive, previously unknown regions and their products. Rather than a biographical dictionary or a collection of self-contained essays on individuals from many time periods, Ladies in the Laboratory III is a connected narrative tied into the wider framework of 19th-century science and education. A well-organized blend of individual life stories and quantitative information, this volume is for everyone interested in the story of women's participation in 19th century science. The stories of these women make for fascinating reading and serve as a valuable source for the student of women's and colonial history.

The Great Explorers of the Nineteenth Century Jules Verne 2014-11-17 This forms the third and concluding volume of Verne's Celebrated Travels an Travellers. One is struck with the great mass of interesting matter, geographical, ethnological, and other, which is here compacted together; bespeaking as it does no small amount of research, an still more affording fresh evidence of that instinctive perception of the popular which is, to a large extent, the secret of the author's success in his numerous works. A preliminary chapter is devoted to a general survey of explorations by Seetzen, Burckhardt, Webb, an others in the East in the early part of the century—a survey very interesting so far as it goes, but superficial. The value of the work, however, grows as it advances, the story of African travel evidently drawing out the author's enthusiasm more successfully; and the expeditions of Clapperton and the Landers are narrated with greater fulness, and with more sympathy. The whole of the second part of the book is devoted to Polar Explorers and Circumnavigators, and the stirring careers of Kotzebue and Krusenstern, of Bougainville and Freycinet, as well as of James Clark Ross and John Ross, Parry and Franklin, are concisely and graphically recorded.

The Archipelago of Hope Gleb Raygorodetsky 2017-11-07 While our politicians argue, the truth is that climate change is already here. Nobody knows this better than Indigenous peoples who, having developed

an intimate relationship with ecosystems over generations, have observed these changes for decades. For them, climate change is not an abstract concept or policy issue, but the reality of daily life. After two decades of working with indigenous communities, Gleb Raygorodetsky shows how these communities are actually islands of biological and cultural diversity in the ever-rising sea of development and urbanization. They are an “archipelago of hope” as we enter the Anthropocene, for here lies humankind’s best chance to

remember our roots and how to take care of the Earth. We meet the Skolt Sami of Finland, the Nenets and Altai of Russia, the Sapara of Ecuador, the Karen of Myanmar, and the Tla-o-qui-aht of Canada. Intimate portraits of these men and women, youth and elders, emerge against the backdrop of their traditional practices on land and water. Though there are brutal realities—pollution, corruption, forced assimilation—Raygorodetsky’s prose resonates with the positive, the adaptive, the spiritual—and hope.
