**Writing: A User Manual** David Hewson 2012-02-16 You are a writer and you have a killer book idea. When your project starts to take off you will find yourself managing a writhing tangle of ideas, possibilities and potential potholes. How do you turn your inspiration into a finished novel? Writing a User's Manual offers practical insight into the processes that go into writing a novel, from planning to story development, research to revision and, finally, delivery in a form which will catch the eye of an agent or publisher. David Hewson, a highly productive and successful writer of popular fiction with more than sixteen novels in print in twenty or so languages, shows how to manage the day to day process of writing. Writers will learn how to get the best out of software and novel writing packages such as Scrivener, which help you view your novel not as one piece of text, but as individual linked scenes, each with their own statistics, notes and place within

the novel structure. As you write, you will need to assemble the main building blocks to underpin your artistry : story structure; genre - and how that affects what you write; point of view; past, present or future tense; software for keeping a book journal to manage your ideas, research and outlining; organization and more. The advice contained in this book could mean the difference between finishing your novel, and a never-ending work in progress. An essential tool for writers of all kinds. Foreword by Lee Child.

**Aging Society and ICT** T. Obi 2013-09-12 It is predicted that by 2050, 22% of the world's population will be over 60 years of age. This rapid shift in demographics calls for the development of coherent and forward-looking policies to address the many challenges which will inevitably arise as a result. This book presents 33 articles from the workshop jointly organized by APEC and OECD held in Waseda University, Tokyo, Japan, in September 2012. At this workshop, a group of international experts described a wide range of important issues associated with an aging population, and discussed how both governments and the private sector can best mobilize innovation and research to transform this global challenge into an opportunity for active and productive aging and new sources of sustainable growth. The authors call for a comprehensive approach to achieve policy coherence, as well as for strengthening public-private partnerships and promoting collaboration among multiple stakeholders and systems. The book is divided into six chapters, covering such subjects as lessons learnt from best practice, solutions for the aging society, policy initiatives, health innovation, smart communities and new services. Innovation will be necessary to meet the challenges and to mitigate the health, social and economic impacts of an aging population worldwide, as well as unlocking the potential of ICTs through increased research and new models. This book will be of interest to all those whose work involves the development of new services for older people in sectors such as health and nursing care, education and training, transportation, community development and smart cities, among others.
