scientists of the past. Using this approach you will learn how physical chemists analyze problems and how physical chemistry relates to our understanding of everyday processes. You will also develop skills to use beyond the chemistry classroom including how to use scientific reasoning to draw your own valid conclusions when faced the novel situations and how to communicate your understanding. In any field, logical thinking and effective communication are as important as content knowledge. By following through with the critical thinking analysis used in these Activities you will learn how to do both. --
